Setup "Community Servers"

This document goes over how to setup your automatic download of the community created data packages. Doing the following steps will allow you to get updates from the Hero Lab community just like how you get official updates from Hero Lab. This feature is called the *Powered by Hero Lab* and is very easy to use.

 Start Hero Lab software and at the "Select a Game" window click on the "Find Updates" button in the bottom left corner.

Setup "Community Servers"

Required HL Packages:

Some of the community Pathfinder Packs (ie currently only Pathfinder) require Hero Lab licenses past the CORE license. In example the Pathfinder GM Pack requires many other licenses. This list of required packages is listed on the install of each package after the wording "**Required HL Packages:**"

Please note that the installer is NOT smart enough to actually check for these packages. This is simply a NOTE I have manually entered to alert gamers of what is required.

This step is only if you wish to install into a different directory

- If you wish to install into a different game directory then you will need to click on the blue button marked "Changed...". you will presented with a new small window that will let you type in the name of the folder. For example you have a test Pathfinder game folder named Pathfinder_test. So in the small window you would type in Pathfinder_test.
 - a) Press the blue "**OK**" button and then press the blue button marked "**Start Import**" to do the import into your custom game folder.
